General Information

Overview

Sustainable management of pest animals, plant diseases and weeds is paramount to successfully managing agricultural and natural environments. This unit introduces you to the principles of plant protection and the relevant foundation disciplines of weed science, plant pathology (the science of plant diseases) and entomology (insect science). You will learn key aspects of biology and identification of weeds, pests and plant diseases. You will be introduced to ecological principles of their interactions with agricultural and natural environments. Guided by this fundamental knowledge you will understand, plan and evaluate protection strategies for a range of agricultural and natural environments.
