General Information

Overview

In this unit you will develop a detailed understanding of what constitutes a food production system and the key drivers determining its productivity. You will study the environmental factors and management options driving farming outcomes and examine new and emerging trends and innovations aimed at increasing productivity and improving sustainability of major agricultural industries. Various agricultural strategies and practices will be discussed and external factors such as government policy, market trends and access to infrastructure affecting food production will be analysed. Analyses of case studies drawn from a range of crop and livestock production systems will develop your systems thinking ability.
