General Information

Overview

In this unit you will explore fundamental anatomy, physiology and pathophysiology alteration in function as seen in disease of the cardiovascular, respiratory, endocrine, nervous, and haematological systems, along with the pharmacology of drugs used in the treatment and management of a health alteration within these systems. Throughout the unit, there is an integrated focus on body systems contrasting normal and abnormal, and how changes in health status may be managed therapeutically. The unit concentrates on common major acute and chronic health alterations of these body systems which facilitates a comprehensive study of the pathophysiology encountered in these states, as well as gaining an understanding of normal physiology. This is complemented by the study of the treatment and management of these health alterations. The unit is scheduled to complement Nursing Practice in Context 1, where the nursing responsibilities and care of consumers experiencing these health alterations are explored.
