General Information

Overview

This unit provides a broad introduction to the history and theories of building design with a specific focus on the cultural importance, practical uses, construction, and stylistic designs of those buildings. The fundamental knowledge gained in this unit will underpin many design processes and decisions that you will encounter in your work as licensed building designers. The study topics and assessment tasks will develop skills that will enable you to identify and evaluate the successes and failures of historic and contemporary building types as well as the suitability of those buildings for conservation, re-use, or re-development.
