General Information

Overview

This unit provides a practical introduction to web design and development, beginning with the basic technical concepts that make the Web possible. You will learn how to create web pages with the Hypertext Markup Language (HTML), and how to redefine the way browsers display web pages with Cascading Style Sheets (CSS). Using software tools such as Adobe Photoshop, you will prepare graphics for web pages and develop an understanding of image file formats and colour models. You will learn how to apply principles of visual design, usability, accessibility and information architecture to web design. With the aid of a front-end web framework, you will learn how to create responsive web pages that automatically adapt their appearance and behaviour to provide an optimal viewing experience across a wide range of devices.
