## General Information

### Overview

In Chemical and Physical Sciences, students apply theoretical concepts and current research related to teaching and learning in Science to engage in authentic evaluation and pedagogical design practices. Chemical and Physical Sciences examines both theoretical perspectives and the content and pedagogy required to teach Science in Primary and Early Childhood classrooms. Students develop understanding of the content and structure of these two strands in the Australian Curriculum and build on the knowledge and skills they developed in the Biological and Earth and Space Science unit to further examine views around best practice in Science pedagogy linked to current research. Chemical and Physical Sciences includes an emphasis on assessment practices in Science which can be applied to other strands of this learning area. Planning to teach and assess students' understanding of Science is addressed with an emphasis on how best to engage students in this learning area and scaffold understanding to enhance the ability to provide scientific explanations for phenomena.
