

Profile information current as at 29/07/2024 04:05 pm

All details in this unit profile for ENEM13015 have been officially approved by CQUniversity and represent a learning partnership between the University and you (our student). The information will not be changed unless absolutely necessary and any change will be clearly indicated by an approved correction included in the profile.

General Information

Overview

Design of Machine Elements is aimed at integrating and applying prior knowledge in fundamental design, materials sciences, mechanics of materials, statics and dynamics coupled with design strategies and knowledge of machine elements to design various machine components. These skills and knowledge will help you to design, analyse, synthesise and deliver robust engineering solutions. You will acquire strong analytical knowledge of machine elements, their design and load carriage and power transmission mechanics.

Details

Career Level: Undergraduate Unit Level: Level 3 Credit Points: 6 Student Contribution Band: 8 Fraction of Full-Time Student Load: 0.125

Pre-requisites or Co-requisites

Prerequisites: MATH11219 Engineering Mathematics AND (ENEM12009 Structural Mechanics OR ENEM14012 Solid Mechanics and Computational Analysis)

Important note: Students enrolled in a subsequent unit who failed their pre-requisite unit, should drop the subsequent unit before the census date or within 10 working days of Fail grade notification. Students who do not drop the unit in this timeframe cannot later drop the unit without academic and financial liability. See details in the <u>Assessment Policy and</u> <u>Procedure (Higher Education Coursework)</u>.

Offerings For Term 2 - 2024

- Bundaberg
- Cairns
- Gladstone
- Mackay
- Online
- Rockhampton

Attendance Requirements

All on-campus students are expected to attend scheduled classes – in some units, these classes are identified as a mandatory (pass/fail) component and attendance is compulsory. International students, on a student visa, must maintain a full time study load and meet both attendance and academic progress requirements in each study period (satisfactory attendance for International students is defined as maintaining at least an 80% attendance record).

Website

This unit has a website, within the Moodle system, which is available two weeks before the start of term. It is important that you visit your Moodle site throughout the term. Please visit Moodle for more information.

Class and Assessment Overview

Recommended Student Time Commitment

Each 6-credit Undergraduate unit at CQUniversity requires an overall time commitment of an average of 12.5 hours of study per week, making a total of 150 hours for the unit.

Class Timetable

Regional Campuses Bundaberg, Cairns, Emerald, Gladstone, Mackay, Rockhampton, Townsville

Metropolitan Campuses Adelaide, Brisbane, Melbourne, Perth, Sydney

Assessment Overview

 Written Assessment Weighting: 20%
 Project (applied) Weighting: 50%
 Project (applied) Weighting: 30%

Assessment Grading

This is a graded unit: your overall grade will be calculated from the marks or grades for each assessment task, based on the relative weightings shown in the table above. You must obtain an overall mark for the unit of at least 50%, or an overall grade of 'pass' in order to pass the unit. If any 'pass/fail' tasks are shown in the table above they must also be completed successfully ('pass' grade). You must also meet any minimum mark requirements specified for a particular assessment task, as detailed in the 'assessment task' section (note that in some instances, the minimum mark for a task may be greater than 50%). Consult the <u>University's Grades and Results Policy</u> for more details of interim results and final grades.

CQUniversity Policies

All University policies are available on the <u>CQUniversity Policy site</u>.

You may wish to view these policies:

- Grades and Results Policy
- Assessment Policy and Procedure (Higher Education Coursework)
- Review of Grade Procedure
- Student Academic Integrity Policy and Procedure
- Monitoring Academic Progress (MAP) Policy and Procedure Domestic Students
- Monitoring Academic Progress (MAP) Policy and Procedure International Students
- Student Refund and Credit Balance Policy and Procedure
- Student Feedback Compliments and Complaints Policy and Procedure
- Information and Communications Technology Acceptable Use Policy and Procedure

This list is not an exhaustive list of all University policies. The full list of University policies are available on the <u>CQUniversity Policy site</u>.

Previous Student Feedback

Feedback, Recommendations and Responses

Every unit is reviewed for enhancement each year. At the most recent review, the following staff and student feedback items were identified and recommendations were made.

Feedback from UC Reflection

Feedback

Students' low level of engineering drawing and CAD skills

Recommendation

UC should provide more background information and practice tutorials on engineering drawing and CAD.

Feedback from SUTE

Feedback

Introduce more case studies in the weekly discussions

Recommendation

UC should explore the possibility of including more case studies in the weekly lectures.

Unit Learning Outcomes

On successful completion of this unit, you will be able to:

- 1. Develop detailed design of machine components to Australian and International Standards
- 2. Apply the formal procedures of detailed machine design, including requirements, solutions, modelling and evaluation to solve problems
- 3. Analyse and design a range of machine elements, explain the physical basis of their design, usage and operational limitations
- 4. Interpet various design codes and standards
- 5. Work effectively in teams by: identifying individual roles and responsibility, interacting positively with colleagues, and communicating effectively at group meetings
- 6. Communicate as professionals through the production of drawings (computer aided) and Bill of Materials, and through written technical reports.

The Learning Outcomes for this unit are linked with the Engineers Australia Stage 1 Competency Standards for Professional Engineers in the areas of 1. Knowledge and Skill Base, 2. Engineering Application Ability and 3. Professional and Personal Attributes at the following levels:

Intermediate 1.4 Discernment of knowledge development and research directions within the engineering discipline. (LO: 11 41) 1.6 Understanding of the scope, principles, norms, accountabilities and bounds of sustainable engineering practice in the specific discipline. (LO: 11 41)

Advanced 1.1 Comprehensive, theory-based understanding of the underpinning natural and physical sciences and the engineering fundamentals applicable to the engineering discipline. (LO: 1A 3A) 1.2 Conceptual understanding of the mathematics, numerical analysis, statistics, and computer and information sciences which underpin the engineering discipline. (LO: 1A) 1.3 In-depth understanding of specialist bodies of knowledge within the engineering discipline. (LO: 1I 3A 4A) 1.5 Knowledge of engineering design practice and contextual factors impacting the engineering discipline. (LO: 1I 3I 5A) 2.1 Application of established engineering methods to complex engineering problem solving. (LO: 2A 5A) 2.2 Fluent application of engineering techniques, tools and resources. (LO: 2I 6A) 2.3 Application of systematic engineering synthesis and design processes. (LO: 2A 3A) 2.4 Application of systematic approaches to the conduct and management of engineering projects. (LO: 5A) 3.1 Ethical conduct and professional accountability. (LO: 5A) 3.2 Effective oral and written communication in professional and lay domains. (LO: 5A 6A) 3.3 Creative, innovative and pro-active demeanour. (LO: 2A) 3.4 Professional use and management of information. (LO: 1A 4A) 3.5 Orderly management of self, and professional conduct. (LO: 6A) 3.6 Effective team membership and team leadership. (LO: 5A)

Note: LO refers to the Learning Outcome number(s) which link to the competency and the levels: N - Introductory, I - Intermediate and A - Advanced.

Refer to the Engineering Undergraduate Course Moodle site for further information on the Engineers Australia's Stage 1 Competency Standard for Professional Engineers and course level mapping information<u>https://moodle.cqu.edu.au/course/view.php?id=1511</u>

Schedule

Week 1 - 08 Jul 2024		
Module/Topic	Chapter	Events and Submissions/Topic
 Introduction to design of machine elements Design Standards and Design Codes Design for Strength & Stiffness - Review of static design methods 	Lecture Notes Chapters 1 - 4, Shigley	 Discussion on Assignments, Major and minor projects. Assignment 1 (Individual): Design Analysis Problems - 20% total weighting Assignment 2 (Group): Group Design Project - 50% total weighting Assignment 3 (Individual): Individual Design Project - 30% total weighting Form Groups Assignment 2: Group Design Project - Finalize the selection of group design project and submit a 1 page proposal via the submission link on unit Moodle site. Refer to assignment documentation for further details.

Week 2 - 15 Jul 2024		
Module/Topic	Chapter	Events and Submissions/Topic
 Failure Modes and Prevention in Machine Elements Failure Theories and Design for Static Loading 	Lecture Notes Chapter 5, Shigley	Design case study, Problem solving
Week 3 - 22 Jul 2024		
Module/Topic	Chapter	Events and Submissions/Topic
 Design for Variable Loading Fatigue Life Methods - Stress-life & Strain-life Methods Linear Elastic Fracture Mechanics (LEFM) Method 	Lecture Notes Chapters 6, Shigley	Design case study, Problem solving
Week 4 - 29 Jul 2024		
Module/Topic	Chapter	Events and Submissions/Topic
 Design of Shafts – materials, shaft layout, shaft design for stress deflection considerations, critical speeds, limits and fits Design of shaft components - keys and keyways 	Lecture Notes Chapter 7, Shigley	Design case study, Problem solving
Week 5 - 05 Aug 2024		
Module/Topic	Chapter	Events and Submissions/Topic
 Design & Selection of Roller Bearings - Variable loading, Selection of ball, cylinder and tapered roller bearings Design assessment, lubrication, mounting and enclosure design 	Lecture Notes Chapter 11, Shigley	Design case study, Problem solving
Vacation Week - 12 Aug 2024		
Module/Topic	Chapter	Events and Submissions/Topic
Week 6 - 19 Aug 2024		
Module/Topic 1. Gears – types of gears, Spur gear terminology, Lewis Bending equation 2. AGMA Stress equations, AGMA Strength equations, dynamic, overload, size, surface condition factors	Chapter Lecture Notes Chapter 13, Shigley	Events and Submissions/Topic Design case study, Problem solving
Week 7 - 26 Aug 2024		
Module/Topic	Chapter	Events and Submissions/Topic
 Design of Spur & Helical Gears – Load distribution, hardness ratio, stress cycle life, temperature, reliability factors Design of gear trains - calculation of reduction ratios, power transmission 	Lecture Notes Chapter 14, Shigley	Design case study, Problem solving Problem Solving Due: Week 7 Friday (30 Aug 2024) 11:59 pm AEST
Week 8 - 02 Sep 2024		
Module/Topic	Chapter	Events and Submissions/Topic
 Design of Bevel Gears Design of Worm Gears 	Lecture Notes Chapter 15, Shigley	Design case study, Problem solving
Week 9 - 09 Sep 2024		
Module/Topic	Chapter	Events and Submissions/Topic

 Design of Machine frames & Housings Design of Non-permanent Joints - Threads, Screws and Fasteners 	Lecture Notes Chapter 8, Shigley	Design case study, Problem solving
Week 10 - 16 Sep 2024		
Module/Topic	Chapter	Events and Submissions/Topic
1. Design of Permanent Joints - Static Design of Welds 2. Adhesive Bonding	Lecture Notes Chapter 9, Shigley	Design case study, Problem solving Group Project Due: Week 10 Friday (20 Sept 2024) 11:59 pm AEST
Week 11 - 23 Sep 2024		
Module/Topic	Chapter	Events and Submissions/Topic
Design of Mechanical Springs Design and Selection of Mechanical Seals	Lecture Notes Chapter 10, Shigley	Design case study, Problem solving
Week 12 - 30 Sep 2024		
Module/Topic	Chapter	Events and Submissions/Topic
 Tribology, Wear & Lubrication of Machine Elements Design & Selection of Journal Bearings 	Lecture Notes Chapter 12, Shigley	Design case study, Problem solving
Review/Exam Week - 07 Oct 2024		
Module/Topic	Chapter	Events and Submissions/Topic
		Individual Project Due: Review/Exam Week Friday (11 Oct 2024) 11:59 pm AEST
Exam Week - 14 Oct 2024		
Module/Topic	Chapter	Events and Submissions/Topic

Assessment Tasks

1 Problem Solving

Assessment Type

Written Assessment

Task Description

This assignment will consist of two Parts (A and B). Part A will constitute of 10 short answer questions related to the theory presented in the first 6 weeks of the term. All questions shall carry equal marks. Part B will constitute of 4 numerical problems from related content of the first 6 weeks. You must secure at least 50% of the weighted marks for this assessment to pass.

Assessment Due Date

Week 7 Friday (30 Aug 2024) 11:59 pm AEST

Return Date to Students Week 9 Friday (13 Sept 2024)

Weighting 20%

Minimum mark or grade 50%

Assessment Criteria

The main criteria for assessment are: Part A:

You will provide succinct answers to the theory questions along with relevant examples, equations and references (where applicable).

Part B:

1. Solution formulation - development of accurate free body diagrams (FBDs)

2. Application of relevant theory and design equations to calculate required unknowns

3. Neat sketching of any shear force and bending moment diagrams as per recommended practice

4. Comment on the final results obtained

Refer to the assessment handout for more detailed information.

Referencing Style

- Harvard (author-date)
- <u>Turabian</u>

Submission

Online

Submission Instructions

Submit as a PDF document via the submission link on the unit Moodle page

Learning Outcomes Assessed

- Apply the formal procedures of detailed machine design, including requirements, solutions, modelling and evaluation to solve problems
- Analyse and design a range of machine elements, explain the physical basis of their design, usage and operational limitations

Graduate Attributes

- Problem Solving
- Critical Thinking

2 Group Project

Assessment Type

Project (applied)

Task Description

This assessment will involve the design, drawing and CAD modelling printing of a machine assembly for a particular application that you will undertake as a part of a 4-member team. You will begin by forming a team, brainstorming and selecting an engineering application and develop a detailed design of problem by applying the relevant theories and concepts learned during the term. Further detailed instructions are available on the unit Moodle site.

Assessment Due Date

Week 10 Friday (20 Sept 2024) 11:59 pm AEST

Return Date to Students

Week 12 Friday (4 Oct 2024)

Weighting 50%

Minimum mark or grade 50%

Assessment Criteria

The following are the main assessment criteria:

1. Succinct selection and development of the machine assembly including scope, appropriate assumptions, justifications and design limitations

- 2. Detailed design calculations for all components using established design codes, standards and procedures
- 3. Detailed and accurately scaled engineering drawing with BOMs, and relevant specifications for manufacture

4. Comprehensive documentation of the whole design process along with a list of references

Refer to the unit Moodle site for more detailed assessment criteria.

Referencing Style

- Harvard (author-date)
- <u>Turabian</u>

Submission

Online Group

Submission Instructions

Submit the main report as one PDF document and a zip folder of your drawings, solid models and any animations.

Learning Outcomes Assessed

- Develop detailed design of machine components to Australian and International Standards
- Apply the formal procedures of detailed machine design, including requirements, solutions, modelling and evaluation to solve problems
- Interpet various design codes and standards
- Work effectively in teams by: identifying individual roles and responsibility, interacting positively with colleagues, and communicating effectively at group meetings
- Communicate as professionals through the production of drawings (computer aided) and Bill of Materials, and through written technical reports.

Graduate Attributes

- Communication
- Problem Solving
- Critical Thinking
- Information Literacy
- Team Work
- Information Technology Competence
- Cross Cultural Competence
- Ethical practice

3 Individual Project

Assessment Type

Project (applied)

Task Description

In this assignment, you will design an individual machine element or a small assembly and produce an engineering drawing of your final design, as described in the handout. You must secure at least 50% of the weighted marks for this assessment to pass.

Assessment Due Date

Review/Exam Week Friday (11 Oct 2024) 11:59 pm AEST

Return Date to Students

Exam Week Friday (18 Oct 2024)

Weighting

30%

Minimum mark or grade

50%

Assessment Criteria

The main assessment criteria will include:

- 1. Adoption of prescribed design approaches to develop correct FBDs
- 2. Retrieve correct material data and other design coefficients from tables and charts
- 3. Apply correct theory and equations to solve for the unknowns
- 4. Make correct interpretations and comment on the final answers.
- 5. Develop full scale engineering drawing of the result according to AS1100.101 and 201

Refer to the assessment handout for more detailed information.

Referencing Style

Academic Integrity Statement

As a CQUniversity student you are expected to act honestly in all aspects of your academic work.

Any assessable work undertaken or submitted for review or assessment must be your own work. Assessable work is any type of work you do to meet the assessment requirements in the unit, including draft work submitted for review and feedback and final work to be assessed.

When you use the ideas, words or data of others in your assessment, you must thoroughly and clearly acknowledge the source of this information by using the correct referencing style for your unit. Using others' work without proper acknowledgement may be considered a form of intellectual dishonesty.

Participating honestly, respectfully, responsibly, and fairly in your university study ensures the CQUniversity qualification you earn will be valued as a true indication of your individual academic achievement and will continue to receive the respect and recognition it deserves.

As a student, you are responsible for reading and following CQUniversity's policies, including the **Student Academic Integrity Policy and Procedure**. This policy sets out CQUniversity's expectations of you to act with integrity, examples of academic integrity breaches to avoid, the processes used to address alleged breaches of academic integrity, and potential penalties.

What is a breach of academic integrity?

A breach of academic integrity includes but is not limited to plagiarism, self-plagiarism, collusion, cheating, contract cheating, and academic misconduct. The Student Academic Integrity Policy and Procedure defines what these terms mean and gives examples.

Why is academic integrity important?

A breach of academic integrity may result in one or more penalties, including suspension or even expulsion from the University. It can also have negative implications for student visas and future enrolment at CQUniversity or elsewhere. Students who engage in contract cheating also risk being blackmailed by contract cheating services.

Where can I get assistance?

For academic advice and guidance, the <u>Academic Learning Centre (ALC)</u> can support you in becoming confident in completing assessments with integrity and of high standard.

What can you do to act with integrity?

Be Honest If your assessment task is done by someone else, it would be dishonest of you to claim it as your own

Seek Help

If you are not sure about how to cite or reference in essays, reports etc, then seek help from your lecturer, the library or the Academic Learning Centre (ALC)

Produce Original Work

Originality comes from your ability to read widely, think critically, and apply your gained knowledge to address a question or problem
