General Information

Overview

This unit provides an overview of environmental governance in Australia in a frame that integrates sustainability and climate change. Environmental law operates at multiple scales and is shaped by multiple geopolitical and social forces. First, we consider the regulatory framework, including relevant international law and the role of the Commonwealth and State Governments in responding to human impacts on the environment and biodiversity protection. We then move to consider environmental law and protection as subject to ongoing contestation and multiple dimensions of uncertainty. This includes conflict between environmental law rights which are in the public domain and landowners' property and contractual rights in relation to land, and public advocacy and litigation aimed at protecting the environment. Discussion points include the process of environmental impact assessment, climate change law, and regulatory reform.

Previous Student Feedback

Feedback, Recommendations and Responses

Every unit is reviewed for enhancement each year. At the most recent review, the following staff and student feedback items were identified and recommendations were made.

Feedback from Student emails and student evaluation

Feedback

Students have raised the issue they would like more time in advance to view the assessment items.

Recommendation

In future terms, I will look to releasing the assessment items significantly earlier than in the past.

Feedback from Self-reflection and student evaluations.

Feedback

Students struggle with theory and with the relevance of theory to practice.

Recommendation

I will revise the learning materials to recalibrate the balance in favour of reducing the theoretical content.
