General Information

Overview

In this unit, you will study how to represent and solve problems using matrices and matrix operators. Financial mathematics with a focus on solving practical problems is also studied. You will analyse the fundamental properties and operational rules of common functions and their graphical representations. These concepts are further developed with the use of polynomial, exponential, logarithmic, trigonometric and hyperbolic functions and graphs to solve problems. You will also analyse and synthesise mathematical concepts and principles in the areas of matrices, functions, and financial mathematics into cohesive, valid, and logically communicated solutions using correct terminology/notation in addition to mathematical language.
