General Information

Overview

Chronic diseases such as diabetes, asthma and heart disease are the leading causes of death and disability in Australia. From a public health perspective, the prevention of chronic disease is of fundamental importance and is a core skill set for any public health professional. This unit provides an introduction to public health and chronic disease. It will examine biological determinants, the influence of social factors on incidence and prevalence, and behavioural and environmental factors found to be conducive to the development and growth of chronic disease in Australia. Students will also explore individual and population level interventions aimed at reducing chronic disease.
