General Information

Overview

This unit will introduce you to the principles, processes, applications, and issues pertaining to the development and use of psychological assessment. This unit is presented through a number of themes, covering topics such as origins, ethics and uses of psychological testing; testing in adults, children and vulnerable populations; neuropsychological testing and testing for industry and career development. The psychometric basis of psychological assessment and testing is emphasised. You will focus on a variety of common psychological procedures and tests measuring individual differences. Consideration of individual differences and assessment in an Australian context will be a key component of your studies in this unit.

Previous Student Feedback

Feedback, Recommendations and Responses

Every unit is reviewed for enhancement each year. At the most recent review, the following staff and student feedback items were identified and recommendations were made.

Feedback from Student feedback via SUTE.

Feedback

Students commented that some of the lecture recordings were too detailed and could be more engaging.

Recommendation

Review lecture content and associated recordings, and record new videos for those that require updating.

Feedback from Unit coordinator reflection

Feedback

The academic integrity of the written assessment task in this unit is likely to be at-risk for misuse of generative AI (artificial intelligence) by students.

Recommendation

Review and redesign this assessment task so that there is minimal risk of students using generative AI to complete the task. Ensure that expectations around the use of generative AI are made clear to students in the unit profile and on the Moodle site.
